

## Feasibility Design Questionnaire

1. With respect to your organisation and customers, please provide comment in relation to external features, such as the location, windows and doors, height of the building, car parking etc.

SSPC cautious of the lifetime cost. Want to do everything possible to keep the maintenance / cleaning / heating costs etc as low as possible.

Will there be vehicular access around all sides of the building.

More wood cladding to the outside.

Could a calciferous grass be used on the roof, where solar panes are not being used?

Hall and veranda – would be much better facing West, is the 1.5m veranda width enough? Are the windows and doors responding the orientation of the building to take the most advantage? The current plan doesn't take enough advantage of the West Facing aspect. Big terrace in the corner of the L. would be preferable. Can the breakout from the shop and the hall be considered in more detail and how best to fill the L to make the most use of it.

2. With respect to your organisation and customers, please provide comment in relation to the interior of the building, floor area, storage, head height, wall space.

No Comment

3. With respect to your organisation and customers, please provide comment on the overall layout of the building, location and number of toilets, kitchen space, need for a meeting room etc

Can unisex toilets be considered rather than M/F toilets?

4. Do you prefer Option 3 or Option 4 and why?

No Preference, leaning towards Option 3. Except question on the need for the end door on Option 4 as it will be first thing people see.

5. Any further comments.
